The RIEGL VZ-400i is a cutting-edge 3D Laser Scanning System which combines a future-oriented, innovative processing architecture and internet connectivity with RIEGL’s latest waveform processing LiDAR technology. This real-time data flow is enabled through dual processing platforms: a dedicated processing system for simultaneous acquisition of scan data and image data, waveform processing and system operations, and a second processing platform which enables automatic on-board registration, geo-referencing, and analysis to be executed in parallel.

**RIEGL VZ-400i**

Ultra High Performance 3D Laser Scanner

Redefining Productivity!

Typical Applications

- Architecture & Facade Measurements
- As-Built Surveying
- Archeology & Cultural Heritage Documentation
- City Modeling
- Civil Engineering
- Building Infrastructure Management (BIM)
- Forensics & Crash Scene Investigation
- Emergency Management
- Tunnel Surveying
- Forestry
- Research
- Monitoring

**RIEGL VZ-400i Main Features**

- **ultra high speed data acquisition** with up to 500,000 meas./sec, survey-grade accuracy ≤ 5 mm, up to 800 m measurement range
- **high quality point cloud colorization** based on Nikon® SLR camera image data taken simultaneously during scanning, integration of various cameras possible
- **orientation sensor for pose estimation**
- **advanced flexibility through support** for external peripherals and accessories, e.g. external Bluetooth GNSS receiver on top
- **cloud connectivity** via Wi-Fi and 3G/4G LTE
- **fully compatible with the RIEGL VMZ Hybrid Mobile Laser Mapping System**
- **RiSCAN PRO standard processing software** (included), RiSOLVE for fully automatic registration and colorization of scan data (optional)

**Automatic On-board Registration**

With two processors on-board, the RIEGL VZ-400i is able to perform different processes in real-time such as automatic on-board registration in parallel to the scan data acquisition.
