

Topo-Hydrographic Airborne Laser Scanning System
with Online Waveform Processing and Full Waveform Recording

RIEGL VQ[®]-880-GH

- *designed for combined topographic and hydrographic airborne survey*
- *high accuracy ranging based on echo digitization and online waveform processing with multiple-target capability*
- *multiple-time-around processing for straightforward mission planning and operation*
- *concurrent full waveform output for all measurements for subsequent full waveform analysis*
- *high spatial resolution due to measurement rate of up to 550 kHz and high scanning speed of up to 160 scans/sec*
- *integrated inertial navigation system*
- *additional, fully integrated infrared laser scanner (optional)*
- *up to two integrated digital cameras*

NEW

- *form factor with reduced height optimized for helicopter integrations*

The **RIEGL[®] VQ-880-GH** is a fully integrated airborne laser scanning system for combined hydrographic and topographic surveying. The system is offered with integrated and factory-calibrated high-end GNSS/IMU system and up to two cameras. The design allows flexible application of these components to meet specific requirements. Complemented by a **RIEGL** data recorder, the **RIEGL VQ-880-GH** LIDAR system can be installed on various platforms in a straightforward way.

The **RIEGL VQ-880-GH** carries out laser range measurements for high resolution surveying of underwater topography with a narrow, visible green laser beam, emitted from a powerful pulsed laser source. Subject to clarity, at this particular wavelength the laser beam penetrates water enabling measurement of submerged targets.

The distance measurement is based on the time-of-flight measurement with very short laser pulses and subsequent echo digitization and online waveform processing. To handle target situations with most complex multiple echo signals, beside the online waveform processing the digitized echo waveforms can be stored on the **RIEGL** solid state data recorder for subsequent off-line waveform analysis.

The laser beam is deflected in a circular scan pattern and hits the water surface at a nominally constant incidence angle.

The VQ-880-GH comprises a high precision inertial measurement sensor for subsequent precise estimation of the instrument's exact location and orientation. Two high-resolution digital cameras and an additional infrared laser scanner are integrated to supplement the data gained by the green laser scanner.

The rugged internal mechanical structure together with the dust- and splash water proof housing enables long-term operation on airborne platforms.

Typical applications include

- *coastline and shallow water mapping*
- *acquiring base data for flood prevention*
- *measurement for aggradation zones*
- *habitat mapping*
- *surveying for hydraulic engineering*
- *hydro-archeological-surveying*

RIEGL VQ-880-GH Scan Pattern

RIEGL VQ-880-GH Elements of Function and Operation

Important Note:

The following technical data is relevant for a **RIEGL VQ-880-GH Topo-Hydrographic Airborne Laser Scanning System** equipped with an additional Infrared Laser Scanner and is to be seen as a supplement to the Technical Data of the Basic System with Green Laser Scanner.

Laser Product Classification

Laser Class

for **RIEGL VQ-880-GH** with additional Infrared Laser Scanner

Class 3B Laser Product according to IEC60825-1:2014

The following clause applies for instruments delivered into the United States: Complies with 21 CFR 1040.10 and 1040.11 except for deviations pursuant to Laser Notice No. 50, dated June 24, 2007. The Instrument must be used only in combination with the appropriate laser safety box.

NOHD ¹⁾

1) NOHD ... Nominal Ocular Hazard Distance, based upon MPE according to IEC60825-1:2014, for single pulse condition

175 m ²⁾

2) NOHD is determined by green laser scanner. NOHD of the infrared laser scanner: 8 m

Range Measurement Performance

Measuring Principle

time of flight measurement, echo signal digitization, online waveform processing

Max. Unambiguous Measurement Range ^{3) 4) 5)}

@ Laser Pulse Repetition Rate

natural targets $\rho \geq 20\%$

natural targets $\rho \geq 60\%$

Max. Operating Flight Altitude ⁶⁾

Above Ground Level (AGL)

145 kHz	245 kHz	550 kHz
900 m	700 m	500 m
1500 m	1200 m	850 m
800 m (2600 ft.)	650 m (2130 ft.)	450 m (1480 ft.)

Minimum Range ⁷⁾

Accuracy ^{8) 10)}

Precision ^{9) 10)}

Laser Pulse Repetition Rate ^{11) 12)}

10 m
25 mm
25 mm
up to 550 kHz

Max. Effective Measurement Rate ^{6) 12)}

45 000 meas./sec (@ 145 kHz PRR & 40° FOV)
79 000 meas./sec (@ 245 kHz PRR & 40° FOV)
177 200 meas./sec (@ 550 kHz PRR & 40° FOV)

Echo Signal Intensity

Number of Targets per Pulse

Laser Wavelength

Laser Beam Divergence

Laser Beam Footprint (Gaussian Beam Definition)

for each echo signal, high-resolution 16 bit intensity information is provided practically unlimited (details on request) ¹³⁾
1,064 nm (near infrared)
0.2 mrad ¹⁴⁾
22 mm @ 100 m, 105 mm @ 500 m, 200 mm @ 1000 m

Scanner Performance

Scanning Mechanism / Scan Pattern

Field of View (selectable)

Scan Speed (selectable)

Angular Step Width $\Delta \theta$ (selectable)

between consecutive laser shots

Angle Measurement Resolution

rotating polygon mirror / curved parallel lines
 $\pm 20^\circ = 40^\circ$
10 - 200 scans/sec
 $0.002^\circ \leq \Delta \theta \leq 0.045^\circ$

better 0.001° (3.6 arcsec)

- 3) The following conditions are assumed: target larger than the footprint of the laser beam, average ambient brightness, visibility 23 km, perpendicular angle of incidence.
- 4) In bright sunlight, the operational range may be considerably shorter and the operational flight altitude may be considerably lower than under an overcast sky.
- 5) Ambiguity to be resolved by post-processing with RIMTA ALS software.
- 6) Reflectivity $\rho \geq 20\%$, 20° FOV, additional roll angle $\pm 5^\circ$
- 7) Limitations for range measurement capability does not consider laser safety.

- 8) Accuracy is the degree of conformity of a measured quantity to its actual (true) value.
- 9) Precision, also called reproducibility or repeatability, is the degree to which further measurements show the same result.
- 10) One sigma @ 150m range under RIEGL test conditions.
- 11) Rounded values.
- 12) User selectable.
- 13) If the laser beam hits, in part, more than one target, the laser's pulse power is split accordingly. Thus, the achievable range is reduced.
- 14) Measured at the 1/e² points. 0.20 mrad corresponds to an increase of 20 cm of beam diameter per 1000 m distance.

Integrated Digital Cameras ¹⁾
